-(root@kali)-[~]  
# sudo airmon-ng start wlan0  
Found 1 processes that could cause trouble.  
Kill them using 'airmon-ng check kill' before putting  
the card in monitor mode, they will interfere by changing channels  
and sometimes putting the interface back in managed mode  
  
PID Name  
481 NetworkManager  
  
Requested device 'wlan0' does not exist.  
Run /usr/sbin/airmon-ng without any arguments to see available interfaces  
  
-(root@kali)-[~]  
# sudo modprobe mac80211_hwsim radios=2  
  
-(root@kali)-[~]  
# ifconfig

```

Didn't have live usb stick to make kali bootable onto device to get wlan0 setting but created virtual cards to compensate

```
-(root@kali)-[~]  
# sudo airmon-ng start wlan0  
  
Found 2 processes that could cause trouble.  
Kill them using 'airmon-ng check kill' before putting  
the card in monitor mode, they will interfere by changing channels  
and sometimes putting the interface back in managed mode
